SAVIN BCF YARN

About Us:

Factory was established in 1995 aimed to produce BCF yarn (Bulked Continuous Filament) from polypropylene granules and its synthesis with master batch, which will finally be used for manufacturing carpets.

The production capacity of this factory is about 10 tons yarn in different deniers.

The machinery of this complex has been chosen from the most advanced systems in Europe. The production process of yarn from feeding PP granules, feeding master batch and producing cotton reels are entirely automated.
